**Evolution of BUGS BUNNY - 80 Years Explained | CARTOON ...**  
Very readable and interesting account of the evolution of insects from the cambrian period onwards. Makes a couple of very interesting points. The author argues that insects colonised the land before plants and animals. He shines a light onto a dark crevice to expose our creepy crawly co-inhabitants and the story of insect evolution.

Bugs have always been indicator species. In the late nineteenth century, as England perfected the structures of industrialized labor subjugation that prefigured contemporary post-Fordist capitalism, a moth began to change its spots: the peppered moth, known for the delicately speckled patterning of dark pigmentation on its light gray wings.
