The naked brain : how the emerging neurosociety is ...

Between 12 and 25, the brain changes its structure in a few important ways. Like an overeager forest, neurons in the early adolescent brain become bushier, growing more and more overlapping branches whose twigs reach toward one another, nearly touching except for tiny gaps known as synapses. When an electrical impulse—or action potential—reaches a twig, the neuron flings spurts of chemical messages across the synapse.
