Ergodic theory is a branch of mathematics that studies statistical properties of deterministic dynamical systems. In this context, statistical properties means properties which are expressed through the behavior of time averages of various functions along trajectories of dynamical systems. The notion of deterministic dynamical systems assumes that the equations determining the dynamics do not contain any random perturbations, noise, etc. Thus, the statistics with which we are concerned are prope

Every winter semester we offer an introductory course in Dynamical Systems or Ergodic Theory (either in UZH or in ETH) aimed towards bachelor students and master students. In the summer semester we offer introductory courses into one of our research areas (such as homogeneous dynamics, Teichmüller dynamics, or ergodic theory of group actions).
